JOS DE GROOT TERRASADVIES

NAGOMI

INODA+SVEJE

Nagomi by Inoda+Sveje invites a sense of calm where sculptural softness meets meticulous craftsmanship. Inspired by the Japanese concept of harmony and balance, its gently flowing lines and ultra-light cast aluminium frame create a serene, understated presence. Handwoven Canax® detailing adds natural texture and lasting comfort, with finishes in linen aluminium with linen weave or dark bronze aluminium with copper weave. Designed for both dining and lounging, the collection includes an armchair, lounge chair, bench, dining tables with teak or ceramic tops on aluminium frames, and a lounger available with fixed legs, wheels, or stackable legs with wheels. Nagomi integrates effortlessly into any setting, offering spaces of quiet refinement.

FABRICS & MATERIALS

MATERIALS

Frame: **Aluminium** is a non-ferrous metal, which combines great mechanical rigidity with light weight. This makes it especially suitable for furniture. If treated correctly, it has a good resistance to corrosion. By powdercoating aluminium, this corrosion resistance can even be enhanced. After a chemical pre-treatment, an epoxy powder is applied statically and baked. Tribù always uses European, ultra-durable and scratch-resistant polyester powdercoatings that guarantee a UV-resistance of 15 years. Additionally, an extra epoxy primer coat is applied for these collections.

Seat & back: **Canax®** is a unique combination of natural hemp and synthetic fibres. Unbreakable polyester fibres give strength and stability. PVC makes the Canax® stain repellent and resistant to outside influences, fungi, frost and UV radiation. The hemp finally, gives the material a surprisingly matte look and a natural touch, almost like leather. Canax® is also a CO2 positive product. As hemp is a natural product, differences in colour and structure may appear, giving the furniture - together with the hand weaving - a unique craft appearance, which cannot be regarded as a fault.

Table top:
Ceramic has been used for centuries for all kinds of purposes. With its unique characteristics it is the ideal material for outdoor table tops. Ceramic is UV-resistant, frost proof, extremely scratchproof and completely stain-repellent. The ceramic used by Tribù is coloured in the mass and guarantee years of carefree pleasure. The raw materials are selected very carefully by suppliers from Western and Southern Europe only. Every top is unique. For example, the Scisto colour may show subtle veins, but this is not the case for every top. The ceramic table tops are slightly bended so water can flow off.

Teak
Because Tribù makes no concessions when it comes to quality, we only use carefully selected, fully grown teak, which is harvested in accordance with the strictest environmental standards from the three highest quality Indonesian plantations in the East of Java. The local productions are checked all year round by subsidiary Tribù Asia, based in Semarang and led by a European management. Tribù designs its furniture in the way that the wood is used as efficiently as possible.
Teak is classed as the most premium wood on the planet and therefore the most suitable species for outdoor furniture. Beyond its beauty, teak possesses some natural properties that other woods don't have. It is extremely durable, stable, water and weather resistant. This is due to the high levels of natural oils which result in minimal moisture absorption, giving it great stability. Moreover, the wood is extremely resistant to fungi, as well as against parasite attacks and insects.
A tree is mature after 30 years. The trees are ringed, which means that the lower band of the bark is removed. The tree then loses most of its sap. About two years later it is felled and sawed up. Tribù selects each log based on its structure. Drying the wood is a very important phase and determines how it reacts later on. The time and speed of drying depends on the thickness of the material. Ideally the level of moisture lies between 8 and 12%.

CUSHIONS

The filling has a cover in a laminated, water-repellent polypropylene material which prevents water from penetrating. The thread used to stitch the seams swells when getting wet, preventing water from penetrating through the seams. Moreover, the seams are protected on the inside with an extra covering. If nevertheless water should penetrate, the material is breathable, letting moisture out to prevent moulding. Fabrics available in category D, E & F.
